

PVC STRIP DOORS

The Company OCM is specialized in the manufacturing Pvc strip doors.

They are normally installed in warehouses, in order to seal out wind, cold, heat and insects.

They guarantee a barrier against noise and dust, so these closures are advisable to separate an area in your plant with loud machinery or smoking areas.

The hardware is available in galvanized steel, stainless steel or aluminium, according to the Customers' requests.

The delivery time is always very fast and the installation is easy and quick, requiring a very little maintenance.

They are not expensive and can save money in the energy costs every year.

OCM Industrial Doors

Via Mongilardi 3 - 13900 - BIELLA - ITALY

They can cover large or small door openings with fixed or sliding hardware, assuring an easy pass-through by your staff or by a fork-lift.

The replaceable strips are always available in our stock. Our range of Pvc rolls consists of transparent, coloured Pvc and welding screens.

We can offer also the polar version of the Pvc strip curtain for the cold rooms and the refrigerated delivery trucks.

This Pvc remains soft also in the negative temperatures, it helps limiting the heat loss while opening the door.

Our staff will be glad to answer all your questions about the technical questions and advice you for the best solution. Please call us to have a free quotation.
